PROFESSIONAL SUMMARY

Results-driven Computer Science graduate and Full Stack Developer with hands-on experience building, deploying, and maintaining web applications using JavaScript, Node.js, Express, and Python. Proven ability to translate requirements into functional, scalable solutions, automate workflows, and improve system efficiency. Strong foundation in backend development, APIs, and data processing, with exposure to frontend development for user-centric products. Adept at learning new technologies quickly and delivering projects end-to-end within defined timelines.

.

PROFESSIONAL EXPERIENCE

Backend Developer – NYSC

January 2026 – March 2026

WebDeves Academy

- Contributed to the development of the backend infrastructure for an online developer education platform nearing production launch.
- Implemented server-side logic and API endpoints to support user accounts, learning resources, and platform operations.
- Collaborated with frontend developers to ensure seamless integration between backend services and user interfaces.
- Participated in testing and debugging to improve application stability, performance, and readiness for launch.
- Strengthened skills in collaborative development, code reviews, and real-world production workflows.

Video Director – NYSC

June 2025 – March 2026

WedDeves Academy

- Directed and edited short-form and long-form video content for digital platforms, improving content clarity, engagement, and storytelling quality.
- Wrote structured scripts and content outlines aligned with project goals, audience needs, and platform requirements.
- Managed end-to-end content production workflows, including concept development, scripting, editing, and final delivery.

- Collaborated with stakeholders to refine content strategy, ensuring timely delivery and alignment with brand objectives.
- Developed transferable skills in project management, communication, creative problem-solving, and deadline-driven execution.

Javascript Instructor
Rad5 Tech Hub
Aba, Abia State

July 2023 -August 2023

- Delivered structured JavaScript training to beginner-level learners, improving foundational programming proficiency across cohorts.
- Designed lesson plans, coding exercises, and mini-projects to reinforce practical understanding of core JavaScript concepts.
- Collaborated with technical team members on internal projects, contributing to development, testing, and refinement cycles.
- Proposed process and instructional improvements during strategy sessions, with selected ideas adopted into training delivery.
- Strengthened communication and technical mentorship skills through continuous learner feedback and team collaboration.

PROJECT EXPERIENCE

TalentScout – AI-Powered Candidate Profile Aggregator (Full Stack Project)

- Designed and developed a full-stack web application that aggregates and structures candidate data from LinkedIn profiles and uploaded CVs (PDF, DOC, and DOCX) into unified, searchable profiles.
- Engineered backend services using Node.js and Express.js to handle data ingestion, processing, and profile generation from unstructured and semi-structured sources.
- Integrated AI-powered data extraction using Groq to intelligently parse and extract key candidate attributes (skills, experience, and education), improving accuracy and reducing manual data entry.
- Implemented efficient data storage and retrieval using MongoDB, with Redis utilized for caching and temporary data handling to optimize performance and response times.
- Built secure authentication and authorization mechanisms using JWT, HTTP-only cookies, and password hashing to protect user sessions and sensitive data.
- Designed and exposed RESTful APIs for candidate profile creation, search, retrieval, and deletion, ensuring clean separation between frontend and backend systems.
- Developed advanced search functionality to enable efficient querying and management of candidate records.
- Deployed a production-ready architecture with frontend hosted on Vercel and backend

services on Render, ensuring scalability, reliability, and continuous delivery.

- Structured the application using modular and scalable design principles to support future enhancements such as ranking algorithms and analytics.

Technologies Used: JavaScript, Node.js, Express.js, MongoDB, Redis, Groq API, JWT Authentication, REST APIs, Vercel, Render

Subscription Tracker Application (Node.js & Express)

- Developed a backend application to track user subscriptions and send automated renewal reminders.
- Designed RESTful APIs to manage subscription data and notification workflows.
- Integrated third-party APIs and deployed the application on a VPS environment.
- Successfully delivered and deployed the solution within 7 months, improving subscription management reliability.

SkillLift: Learning Management System (Full Stack Developer) In Progress

- Designed and implemented both **frontend and backend architecture** for a learning management system supporting course delivery and user management.
- Built core application features including user authentication, course structure, and content access workflows.
- Developed RESTful APIs to handle data exchange between client and server layers.
- Applied modular code structure to support scalability, maintainability, and future feature expansion.
- Actively iterating on features and performance improvements as part of an ongoing development lifecycle.

E-Commerce Web Application

- Developed a responsive frontend for an e-commerce platform focused on usability and clean UI design.
- Implemented product listings, navigation flows, and basic cart functionality.
- Delivered a fully functional frontend within a 3-month development timeline.

Movie Search Web Application (Frontend Developer – React.js)

- Integrated a third-party **Movie Database API (REST API)** to fetch and display dynamic movie data, including titles, descriptions, and ratings.
- Implemented state management and component-based architecture to ensure maintainable, scalable frontend code.
- Optimized user experience through efficient API calls, conditional rendering, and intuitive UI interactions.
- Deployed the application on **Vercel**, ensuring reliable hosting, fast load times, and continuous deployment support.

Automated Grading Application (Python)

- Built a Python-based application to process Excel files containing student scores and automatically assign letter grades (A–F).
- Reduced manual grading effort by automating score evaluation and output generation.
- Completed and tested the solution within 6 months, improving grading efficiency and accuracy.

SKILLS

Languages: JavaScript (ES6+), Python, TypeScript

Backend: Node.js, Express.js, RESTful APIs

Frontend: HTML5, CSS3, React/[Vuejs](#), Tailwind CSS

Databases: SQL (basic), File-based data processing

Tools & Platforms: Git/GitHub, VPS Hosting, Excel Automation, API Integration, eslint, httpie

Core Competencies: Problem Solving, Debugging, Application Deployment, Collaboration

EDUCATION

B.Sc. Computer Science

Redeemer's University, Ede, Osun State, Nigeria

Nov 2020 – Sep 2024

CERTIFICATIONS

CAD220EN: Back-end Application Development with Node.js and Express by IBM- edX
